About Me

Full-stack developer with over 3 years of experience building scalable web applications and enterprise systems.
Currently working remotely with HUED, a Saudi-based software house delivering diverse client projects across industries.
Skilled in both backend (.NET Core) and frontend (React) development, with a strong foundation in clean architecture, design patterns, and agile methodologies.

Education

Thebes Academy
Bachelor of Computer Science, 2016 – 2020

- Overall Grade: Good
- Graduation Project: School Management System (Grade: Excellent)
  A website facilitating interaction between schools, students, and their parents.

Technologies

Back End

- C# Programming Language
- ASP.NET Core (MVC, API, Minimal APIs)
- Microsoft SQL Server
- Entity Framework Core
- Dapper (Micro ORM)
- Language-Integrated Query (LINQ)

Front End

- HTML5, CSS3
- Bootstrap Framework
- Sass
- React.js (Redux & React Query)
- JavaScript and Typescript
- Material UI / Ant Design

Technical Knowledge

- CQRS Pattern using MediatR
- SignalR for Real-Time Communication
- Version Controls (GitHub, Azure)
- SOLID Principles
- Repository Pattern with Unit of Work
- Agile & Scrum Methodologies

Familiar With

- Docker Basics for Development & Deployment
- Angular Framework
- Redis
- Tailwind CSS
- jQuery Library

Experience

- **Full Stack Developer (.NET Core & React) - HUED Company, Remote - Saudi Arabia**
  May 2025 – Present
  - Delivered multiple client projects across healthcare, education, and agriculture sectors.
  - Built interactive UIs with React and TypeScript, integrating with robust .NET Core APIs.
  - Collaborated in Agile teams, contributing to sprint planning, code reviews, and deployments.

- **ASP.NET Core Developer, Halan Company**
  October 2024 – May 2025
  - Developed B2B/B2C order management and ERP modules for retailers.
  - Improved inventory and logistics processes through optimized APIs.
  - Built scalable web solutions using .NET Core, EF Core, and SQL Server.

- **ASP.NET Core Developer, Oasis Computer Systems Company**
  April 2022 – October 2024
  - Developed insurance document management and e-billing systems.
  - Migrated legacy desktop apps to modern web-based platforms.
  - Enhanced functionalities for client registration, customer services, sales leads, and user account departments.
  - Enhanced client, sales, and service modules using Dapper and .NET Core.

- **Web Designer, Infosas Company**
  May 2019 - September 2020
  - Designed and maintained websites for e-commerce and billing systems.
  - Managed UI/UX, content updates, and front-end optimizations.

Personal Projects

- E-Commerce Application
- Tech: .NET Core API, React (Next.js), Clean Architecture, MediatR, Vertical Slice Architecture
  - Implemented end-to-end features including product and catalog management, order workflows, dynamic promotions, customer reviews, authentication, and secure multi-method payments.
  - Delivered a fully modular architecture with store management, customer profiles, carts, Wishlist, multilingual support, and real-time updates—built on .NET Core API and Next.js for a seamless, modern commerce experience.

  GitHub URL: **Ecommerce App**

- Gym Management System
- Tech: .NET Core MVC, Clean Architecture
  - A full gym-management platform built with ASP.NET Core MVC and clean architecture to streamline members, trainers, sessions, and subscriptions.
  - Includes advanced features such as booking, trainer scheduling, analytics dashboards, and role-based security using Microsoft Identity.
  - Structured across clear layers (Web, Core, Infrastructure) with EF Core, and a clean service-driven design for maintainability.
