About Me

Full-stack developer with 4+ years of professional experience building scalable web applications and enterprise systems.
Currently working remotely with HUED, a Saudi-based software house delivering diverse client projects across multiple industries.
Skilled in both backend (.NET Core) and frontend (React & TypeScript) development, with a solid foundation in clean architecture, design patterns, and agile methodologies.
Experienced in delivering business solutions across domains including healthcare, education, agriculture, insurance, retail, and ERP systems.

Education

Thebes Academy
Bachelor of Computer Science, 2016 – 2020

- Overall Grade: Good
- Graduation Project: School Management System (Grade: Excellent)
  A web-based platform that facilitates interaction between schools, students, and parents.

Technologies

Back End

- C# Programming Language
- .NET Core (MVC, API, Minimal APIs)
- Microsoft SQL Server
- Entity Framework Core
- Dapper
- LINQ

Front End

- HTML5, CSS3
- Bootstrap
- Sass
- React.js (Redux & React Query)
- JavaScript and Typescript
- Material UI / Ant Design

- SignalR for Real-Time Communication
- Version Controls (GitHub, Azure)
- SOLID Principles
- Repository Pattern with Unit of Work
- Agile & Scrum Methodologies

Familiar With

- Docker Basics for Development & Deployment
- Angular Framework
- Redis
- Tailwind CSS
- jQuery Library

Experience

- **Full Stack Developer (.NET Core & React) - HUED Company, Remote - Saudi Arabia**
  May 2025 – Present
  - Delivered multiple client projects across healthcare, education, and agriculture sectors.
  - Built interactive UIs with React and TypeScript, integrating with robust .NET Core APIs.
  - Collaborated in Agile teams, contributing to sprint planning, code reviews, and deployments.

- **ASP.NET Core Developer, Halan Company**
  October 2024 – May 2025
  - Developed B2B/B2C order management and ERP modules for retailers.
  - Improved inventory and logistics processes through optimized APIs.
  - Built scalable web solutions using .NET Core, EF Core, and SQL Server.

- **ASP.NET Core Developer, Oasis Computer Systems Company**
  April 2022 – October 2024
  - Developed insurance document management and e-billing systems.
  - Migrated legacy desktop apps to modern web-based platforms.
  - Enhanced functionalities for client registration, customer services, sales leads, and user account departments.
  - Enhanced client, sales, and service modules using Dapper and .NET Core.

Personal Projects

- E-Commerce Application
- Tech: .NET Core API, React (Next.js), Clean Architecture, MediatR, Vertical Slice Architecture
  - Implemented core e-commerce features including product management, orders, promotions, reviews, authentication, and payment integration.
  - Built additional modules such as customer profiles, carts, Wishlist, multilingual support, and real-time updates.

  GitHub URL: **Ecommerce App**

- Gym Management System
- Tech: .NET Core MVC, Clean Architecture
  - Built a gym management platform for handling members, trainers, sessions, subscriptions, and bookings.
  - Added features such as trainer scheduling, analytics dashboards, and role-based security using Microsoft Identity.
  - Structured the project into clear layers with EF Core for better maintainability and organization.
